SUMMARY

Results-driven Full-Stack Web Developer (GPA: 3.84) awaiting formal graduation. I specialize in building scalable, end-to-end web applications using Laravel, Next.js, Vue.js, and Express.js. Experienced in architecting secure RESTful APIs and responsive frontends, I am eager to bring my technical expertise to a full-time role.

WORK EXPERIENCE

Full Time, Full Stack Web Developer | PT. Univerz Teknologi Utama **Jun 2026 - Present**

- Architected and developed core Enterprise Resource Planning (ERP) modules across finance, inventory, and operations to streamline cross-departmental business workflows.
- Engineered secure RESTful APIs and optimized relational database schemas (PostgreSQL) with Laravel to maintain high data integrity for high-volume enterprise transactions.
- Built responsive, user-friendly frontend interfaces utilizing React, translating complex operational workflows into intuitive dashboards and interactive data tables.
- Collaborated with cross-functional teams to translate complex business rules into scalable, maintainable software architectures and reliable data pipelines.

Intern, Full Stack Web Developer | PT. Ina Gata Persada (Hybrid) **Aug 2025 - Dec 2025**

- Developed and maintained custom software solutions tailored to diverse corporate client requirements.
- Translated UI/UX designs into responsive and interactive frontend interfaces utilizing Vue.js.
- Engineered robust RESTful APIs with Laravel to facilitate seamless data exchange between server-side logic and client applications.

AI Engineer (Bootcamp) | Dicoding & DBS Foundation (Remote) **Feb 2025 – Jul 2025**

- Completed an intensive AI Engineering Bootcamp, developing practical expertise in Machine Learning, Deep Learning, and Data Science methodologies.
- Built and trained predictive models utilizing Python, enhancing analytical problem-solving skills and expanding technical versatility beyond traditional web development.

Intern | BRIN & Datains (Remote) **Aug 2024 - Dec 2024**

- Built and optimized modern web applications utilizing Next.js, focusing on performance rendering and seamless user experience

Full Stack Web Engineer | PT Barouk Raya Teknologi (Remote) **Oct 2022 - Apr 2024**

- Developed and deployed core software solutions specific to banking operations for Bank BPR UMKM Jawa Timur.
- Architected secure backend systems and RESTful APIs using Laravel, implementing strict data validation and secure authentication logic.
- Collaborated closely with cross-functional teams to integrate complex server-side functionalities with intuitive user-facing elements.

Intern Full Stack Web Engineer | JV Partner Indonesia (Malang) **Jan 2021 - Apr 2021**

- Contributed to the development and feature enhancement of web applications using the Laravel framework.
- Actively participated in peer code reviews, providing technical feedback to optimize code quality, maintainability, and system performance.

EDUCATION

Bachelor of Informatics Engineering **Aug 2022 - June 2026**
GPA: 3.84 / 4.00

State Polytechnic of Jember

- Completed all academic requirements and currently awaiting formal graduation.
- Successfully defended final thesis titled "Ekstraksi Informasi pada Literatur Ilmiah Mengenai Mutagenesis EMS Berbasis BERT dengan Menggunakan Model BERT".
- Explored the principles of software engineering, including software lifecycle, testing techniques, machine and quality assurance methodologies.
- Investigated web development technologies, including some Frameworks, to create responsive and user-friendly interfaces.

Software Engineering **Aug 2019 - Jun 2022**

State Vocational High School 1 of Bondowoso

- Gained expertise in object-oriented programming and design patterns to optimize code maintainability and scalability.
- Learned database design and management using SQL to create efficient data storage solutions for software applications.

ACHIEVEMENT

- **Second Place at Lomba Kompetensi Siswa (LKS) SMK 2022** Tingkat Provinsi Jawa Timur in IT Software Solutions for Business
- **Third Place at Lomba Kompetensi Siswa (LKS) SMK 2022** Tingkat Wilayah Kerja 2 Provinsi Jawa Timur in IT Software Solutions for Business

---

PROJECT

- **Belajar Aksara (https://github.com/LuciferLovesMe/BelajarAksara):** A mobile-based interactive educational application designed to teach Aksara Jawa to children, promoting cultural preservation through an engaging digital learning experience.
- **Human Capital System (https://github.com/Bank-UMKM-Jawa-Timur/hcs):** A comprehensive web-based Human Resource Management System (HRMS) developed for Bank BPR UMKM Jawa Timur, designed to streamline employee data management and internal HR operations.
- **Loan Organization System (https://github.com/Bank-UMKM-Jawa-Timur/LOS):** A secure web-based application engineered for Bank BPR UMKM Jawa Timur to efficiently organize, track, and manage customer loan processing and approvals.

- **Ketosin:** A cross-platform (mobile and web) voting application built to facilitate secure, efficient, and transparent intra-school student organization chairman elections at SMKN 1 Bondowoso.
- **TukangIndonesia:** An on-demand web-based platform developed for JV Partner Indonesia, connecting users with professional handymen to simplify online booking and service management.
- **ActGrow (https://github.com/LuciferLovesMe/act-grow):** A web-based agricultural platform designed to bridge the gap between local farmers and certification institutions, facilitating better communication and compliance tracking.
- **API CMS Dimsa:** Engineered a robust Laravel-based RESTful API serving as the backend architecture for a tailored Content Management System (CMS) for Yayasan Dimsa.
- **Edupongo Helpdesk:** Developed responsive and intuitive frontend interfaces for the Edupongo helpdesk system, enhancing the overall user experience for support ticket management
- **Inagata Management Tool:** A comprehensive task management application inspired by ClickUp, built utilizing Laravel and Vue.js to optimize internal workflow and team collaboration at PT. Ina Gata Persada.
- **EduPolije (https://github.com/LuciferLovesMe/tefa-reservation):** An intelligent web-based visitor reservation system for the Teaching Factory (TEFA) at State Polytechnic of Jember, implementing the Forward Chaining Algorithm with Laravel for automated scheduling logic.
- **River & Rainfall Monitoring System (https://github.com/LuciferLovesMe/River-Rainfall-Monitoring-System):** A real-time mobile application developed using Flutter and Firebase to continuously monitor river water levels and rainfall discharge, providing accurate environmental data tracking and critical information management.
- **EMS Mutagenesis Information Extraction (Thesis Project):** An advanced Natural Language Processing (NLP) research project utilizing the BERT (Bidirectional Encoder Representations from Transformers) model to automatically extract, process, and analyze complex information related to EMS mutagenesis from scientific text and literature.
- **Marketplace Ukopia (https://github.com/o2ukopia/web):** Developed a comprehensive e-commerce platform and operational management system. Integrated third-party APIs including Biteship for logistics and Midtrans for secure automated payments. The system features hybrid stock management, real-time table reservations, a loyalty point system, and automated sales reporting, streamlining end-to-end business operations. Built with Laravel, MySQL, and Tailwind.
